The trust layer before the click.

A multilingual cybersecurity assistant—built to help people everywhere make safer digital decisions in seconds.

Live MVP · Kazakh · Русский · English

Mission: make trustworthy AI accessible to everyone.

tumar-ai.streamlit.app

Cybercrime moved into the conversation layer.

23:41

**“Unusual login from Almaty.
Confirm your identity now.”**

recognisable sender · fear · one tap

The user has seconds.

**Antivirus protects the device.
Tumar.AI protects the decision.**

Beachhead: people in Kazakhstan receiving suspicious messages in Kazakh, Russian, or English.

Verify any public fraud statistic before presenting.

BEACHHEAD CUSTOMER

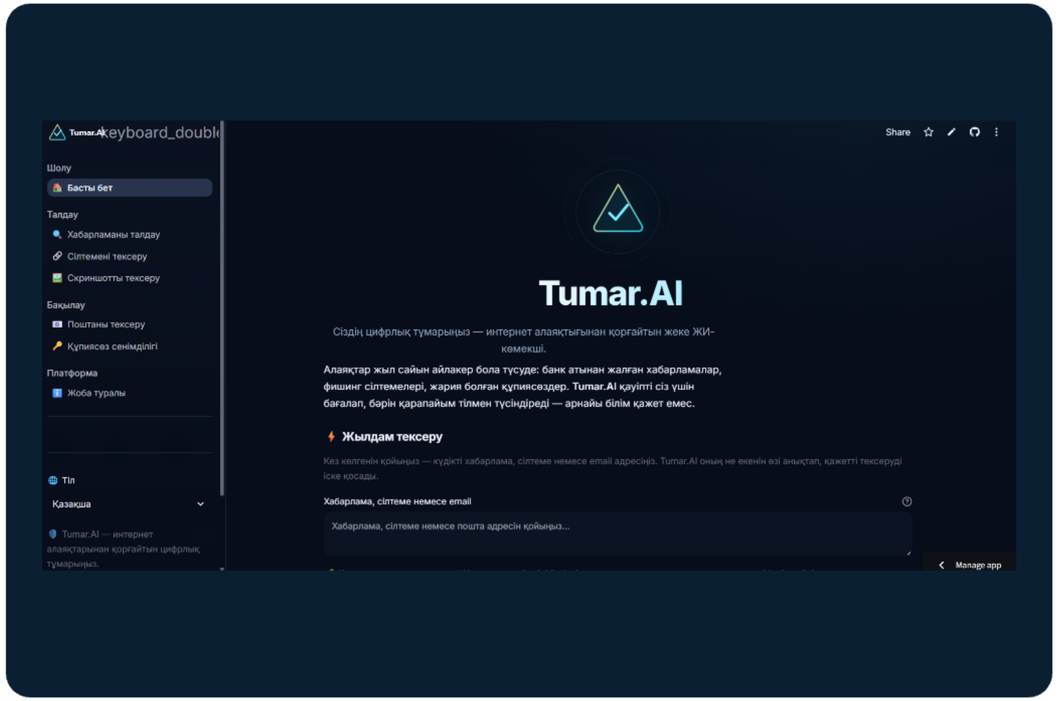

Start with the people and institutions already carrying the pain.

PRIMARY USER	**Everyday smartphone user**	Needs an answer before clicking or replying
DISTRIBUTION PARTNER	**Bank or telecom operator**	Already owns the trust relationship and support cost
EXPANSION BUYER	**Government, university, enterprise**	Needs multilingual protection at volume

Kazakhstan first → Central Asia next

PRACTICAL MVP TODAY

Streamlit makes the product real, shareable, and testable now.

1

User input

Paste a message, link, or email

2

Trust report

Score + evidence + explanation

3

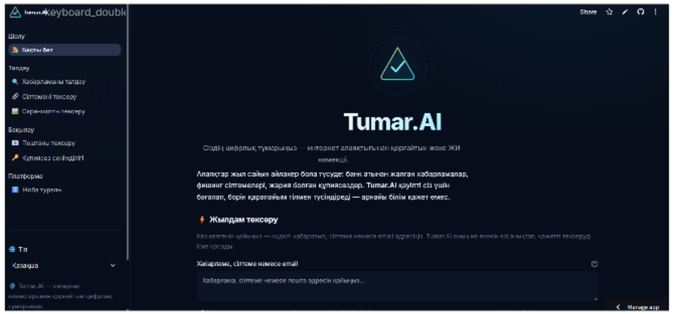

Next action

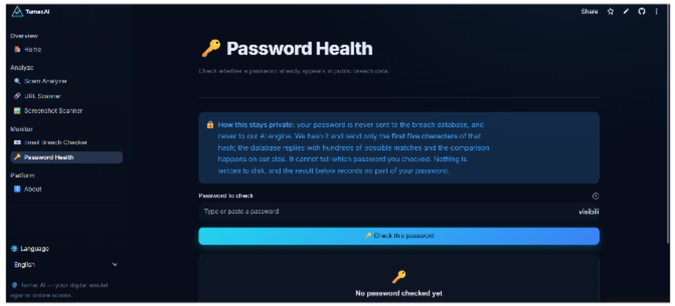

One safe decision

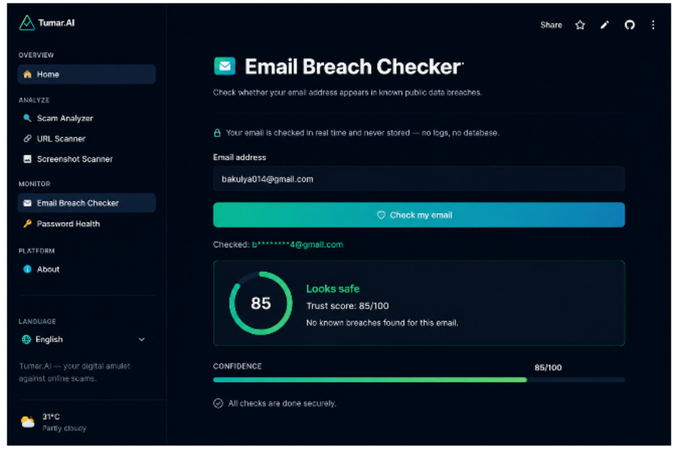

Streamlit Community Cloud gives the MVP a public URL, GitHub-based updates, and managed secrets; the next step is reliability and measurement.

LIVE PROOF

The product explains the risk—and tells the user what to do next.

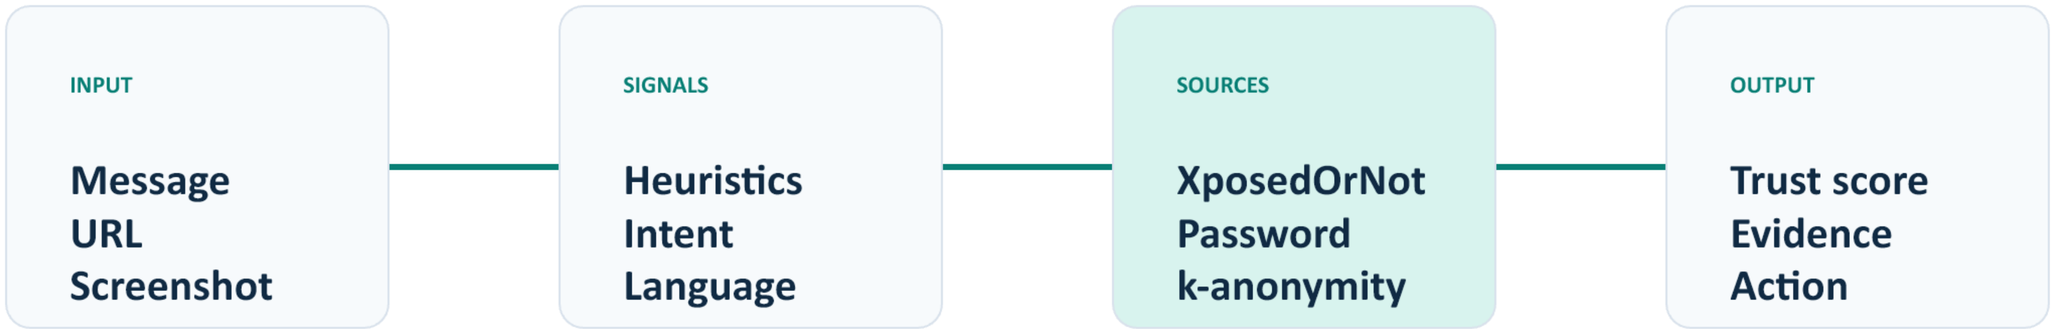

Messages · Links · Screenshots · Passwords · Breaches

GROUNDED INTELLIGENCE

AI explains. Security sources verify.

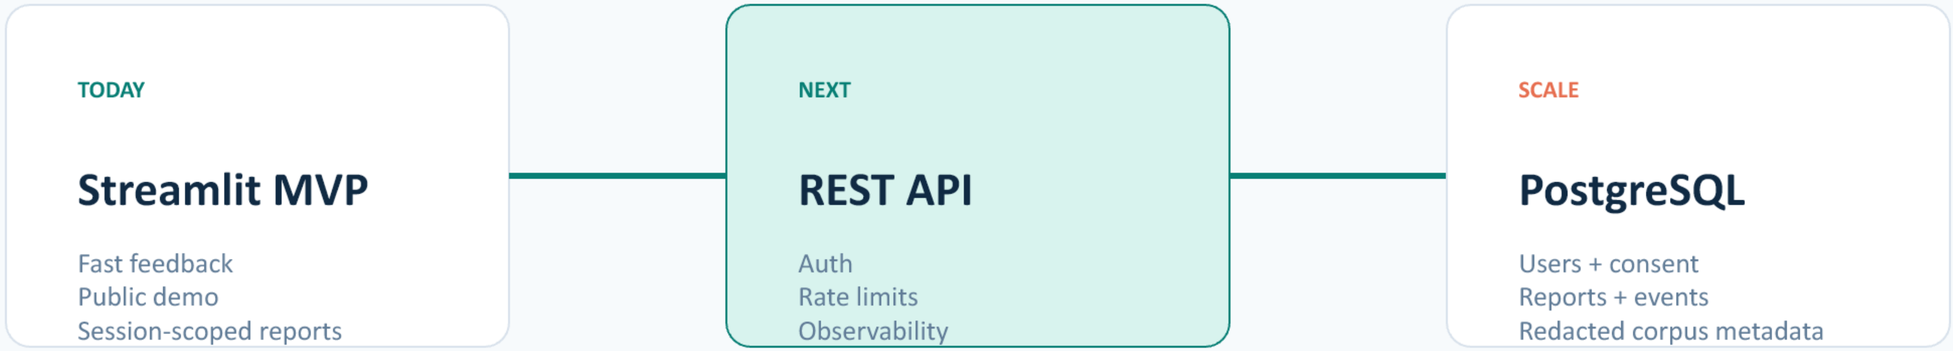

Why XposedOrNot?

It gives Tumar.AI a real breach-exposure signal instead of asking a language model to guess whether an email has appeared in known leaks.

SCALE PLAN

Streamlit is the front door. PostgreSQL becomes the memory layer.

PostgreSQL is not for storing raw passwords or indiscriminate message dumps. It is for controlled, auditable product data and consented, redacted learning signals.

BUSINESS MODEL

Free distribution now. Paid prevention where the cost is visible.

FREE

Web app + Telegram bot

Acquire users and learn the threat patterns

PILOT

Bank / telecom

Measure prevented scams and support burden

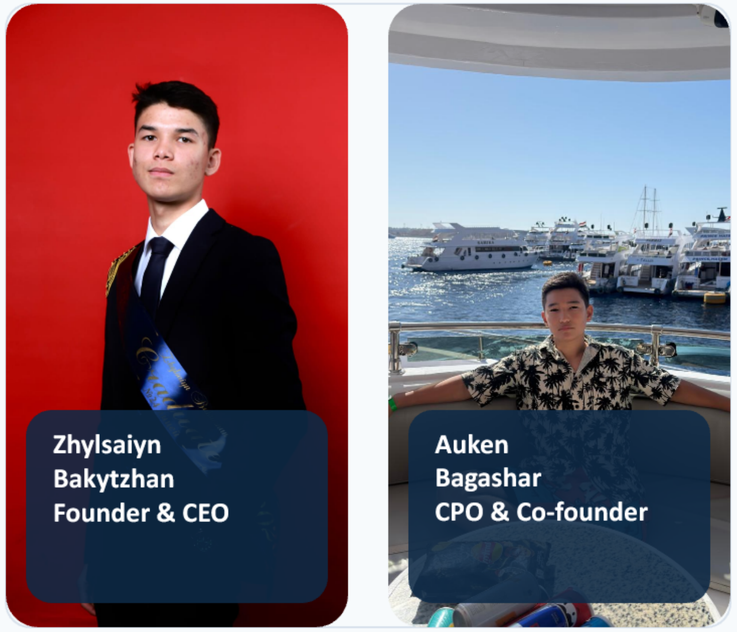

API

Institutional licence

Charge by protected customers or volume

First pilot metrics: correct intervention rate · false positives · repeat usage · support-call reduction

Two founders. One trust layer for every digital decision.

“Protection works when people can understand the risk—and act before they click.”

FOUNDING TEAM

Zhylsaiyn Bakytzhan, Founder & CEO
Vision, AI strategy, partnerships, and go-to-market.

Auken Bagashar, CPO & Co-founder
Product direction, user experience, and safe action flows.

Every phone should carry a digital amulet.

The ask: a pilot partner, real-world scam patterns, and measured feedback.
